dbh and DAKOSY	German Ports – COREOR 95B	
----------------	---------------------------	--

1 The message COREOR

The COREOR message is used to convey container release orders, thereby authorising the release or pick-up of containers. In the context of German Ports, the COREOR message transmits information concerning the release of full containers as well as the forwarding agent entrusted with their subsequent handling.

Similar to other EDI systems, German Ports accepts various request messages for creating a release order. These request messages can be sent in two different formats: XML messages (type “Request”) or an EDIFACT message (type “COREOR”). The format of the request message determines the format of the subsequent response: a request sent via XML will trigger an XML response, while a request sent via EDIFACT will trigger an APERAK response.

This implementation guide describes the content and structure of the COREOR message sent to German Ports by the carrier needed to create the digital Pick-Up Right.

This document is based on the descriptions published by SMDG and terminal operators. Any optional data which are not required in the Secure Release Order will be accepted as well.
